

GLOBAL SOLUTION FOR FOOD PROCESSING PLANTS

Spread

Spread

Spreads are of pasty or syrupy consistency, they are sweet or savoury depending on the type, and are usually packaged in pots or tubes.

The two main kinds of spreads are :

- Savoury peanut-based spread
- Sweet chocolate-based spread

PEANUT BUTTER SPREAD

Simple and robust lines are particularly designed for use with production sites.

Whole peanuts are cleaned, roasted and then ground after cooling. The whole is crushed, and after adding oil and salt, the mixture is packaged.

CHOCOLATE SPREAD

The process is similar to the previous one, **with the addition of sugar.**

The crushed sugar is fed into the mixer/blender. This mixture is then ground in a final mill before being transferred to the packaging machine.
